**An expert Session “An interaction on bridging gap between Institute and Industry”**

There are several challenges in the present Indian education system including an excessive emphasis on memory and the least emphasis on creativity. Currently, there is a wide gap between the acquired knowledge and required knowledge in India. Students acquire qualifications but find it difficult to acquire employment because the expectations and aspirations of the employers are different from the educational institutions. The educational institutions emphasize theory and equip students with theoretical inputs and knowledge which is far away from the expectations of the employers. Employers look for ‘plug and play’ candidates to meet the industry's expectations. In this regard, we will discuss the current gap between the educational institutions and industry expectations and offer innovative tools and techniques to bridge the gap effectively.
